

Mozilla thunderbird mail setup

Download link <https://www.mozilla.org/en-US/thunderbird/>

Here are the instructions to set up your harewaves email address . If you have just installed Thunderbird, then when you open it up you will have a window pop up showing suggested options such as Gmail, etc. that you can use. At the bottom is an option for you to use an existing account. This will let you type in the harewaves mail information. Use the following details in the setup. If you already have it installed and are adding the mail account manually the following steps.

1. Near the top left hand corner of the Thunderbird window there is a button with 3 horizontal lines one on top of the other. Click this menu button, then **mouse over the Options button**, and click **Account settings**.
2. On the settings window at the bottom, click **Add Mail Account**
Type in the following:
 - Your name – this can be anything that you want
 - Email Address – enter your harewaves email address
 - Password – enter your Harewaves email password
3. Click **Continue** It will try to find the settings but you will need to edit them in the next step
4. Click **Pop3** then click **Manual Config**
5. Edit each of the following spaces:
 - Incoming: Pop3, Server Hostname mail.harewaves.net, Port 995, SSL SSL/TLS, Authentication Normal Password
 - Outgoing: SMTP, Server Hostname mail.harewaves.net, Port 2525, SSL None, Authentication Normal Password
 - Username for incoming and outgoing - your harewaves email address
6. Click **Done** This should have it. At any time you can go back into this setting page by clicking Account settings, and then looking in the list on the left under Server Settings, and Outgoing Server if you need to edit anything. Enjoy.
